

SLOTWISE

One system, everything handled.

The revenue generation and protection platform for salon, spa and clinic brands — from a single outlet to a national franchise network, on one login.

1 + 3

One web platform, three mobile apps

10

AI engines live in production

100+

Live HQ modules across 8 command areas

48 hrs

From sign-up to live

One login. Every role sees its own workspace.

Slotwise is a single web platform. The workspace changes with who logs in and which store they select — HQ, franchisee, outlet, manager or staff — so nobody runs two systems and nobody reconciles two truths.

HQ command centre

What needs the network today, ranked by rupees. Royalty, receivables, approvals, supply chain, franchise development, intelligence.

Franchisee and outlet workspace

Bookings, billing, staff, inventory, settlements with the brand, approvals and every leak in the outlet's own money — scoped to what the owner runs.

Manager and front-desk workspace

Today's roster, quality checks, the calendar and the till. Minimal clicks, trained in minutes, governed by 288 permission switches.

THREE MOBILE APPS, UNDER YOUR BRAND

Professional App

For stylists, therapists and doctors: who is next, client notes, check-ins, earnings in real time, six AI coaching tips a day.

Partner App

For franchise partners and suppliers: purchase orders, OTP delivery handover, batch trace, cycle counts, settlements.

Consumer App

For your clients: book in seconds, one profile across salon, clinic and retail, reminders, loyalty — no booking fees.

BUILT ON THREE INTEGRATED SYSTEMS

Revenue generation, protection and insights catch invisible leaks and promote upselling. **Operational command** eliminates chaos and enforces control. **Growth intelligence** turns customer data into repeat revenue.

Everything syncs in real time. Every stakeholder stays aligned. Every decision is backed by loss-prevention data. Your data stays yours — export any time.

Stop losing money. Start generating and protecting revenue.

Most owners learn they were losing money after the month closes. Slotwise shows the leak while it is still open, prices it, and attaches the fix.

01

Revenue generation, protection & insights

- AI Loss Engine tracks hidden drainage from cancellations, no-shows and overused staff discounts. One salon found ₹88,000 a month it did not know about.
- Impact simulation shows the cost of every rejected booking.
- Dynamic Pricing adjusts rates to demand. One salon saw approximately ₹42,800 a month in extra revenue.
- Gap recommendations fill low-utilisation slots automatically.
- Revenue analytics surface unused capacity. One salon found a ₹45,200 growth opportunity it was missing.

02

Operational command

- Real-time scheduling prevents double bookings and confusion.
- 288 permission switches control who accesses what, down to the module.
- Integrated HRMS for attendance, payroll, leave and coordination.
- AI inventory prediction prevents stock-outs and waste — 94% accuracy observed.
- Payment processing tracks every rupee; POS built in, no separate billing.
- Quality-check workflows, rebooking rates and rework hours per team member.

03

Growth intelligence

- Smart CRM stores complete history and behaviour patterns.
- AI-led upselling generates targeted messages from client data.
- Automated loyalty campaigns with VIP-tier precision.
- WhatsApp-integrated satisfaction tracking catches problems before clients leave.
- Churn Prediction flags at-risk clients and triggers retention — 78% of flagged clients come back.
- Identifies fraudulent review patterns.

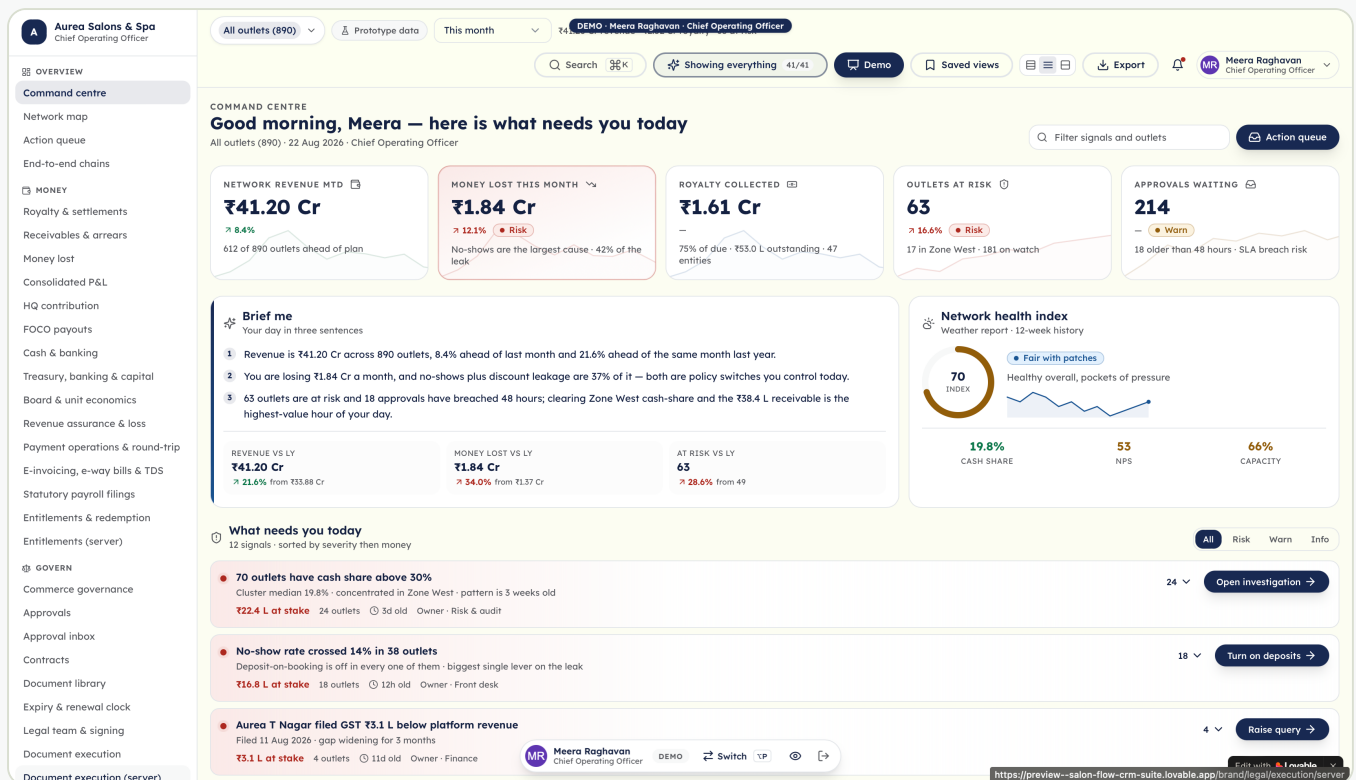

Single-salon figures are stated as exactly that. Percentages are observed rates across live outlets. Your number comes from a Revenue Control Audit on your own data — not from this page.

Your network's command centre.

For franchisors and multi-outlet brands, HQ opens on one question: what needs you today, ranked by rupees, with the action one click away.

THE COMMAND CENTRE

ILLUSTRATIVE DEMO DATA

1

Five money-first tiles

Network revenue MTD, money lost this month, royalty collected, outlets at risk, approvals waiting — each with trend and cause.

2

Brief me

Your day in three sentences, written by the system from the network's signals.

3

Signals with actions

Every row carries rupees at stake, outlet count, age, an owning function and a one-click action.

4

Network health index

Cash share, NPS and capacity on one dial, with twelve weeks of history.

Seven moments a COO recognises from their own week.

Not a module list. The routines that change how a network is run.

1

What needs me today

Every morning, ranked by rupees at stake, with the action one click away.

2

Where the money went

No-shows, discount leakage, idle hours, stock variance — named, priced and owned.

3

Royalty without arguments

Live royalty on platform revenue, cash-share anomalies flagged, a settlement ledger both sides can see.

4

Every franchisee, 360°

Health, compliance, contract clock and open items per partner — before the relationship sours.

5

Supply chain you can trace

From tender to chair, with OTP handover and batch recall — the retail-grade backbone salons never had.

6

Open the next 100 outlets

Franchise development as a pipeline, not a spreadsheet — from lead to first-month ramp.

7

Ask the network

Ask a question in plain language, simulate the policy, roll it out with holdouts, and log the decision.

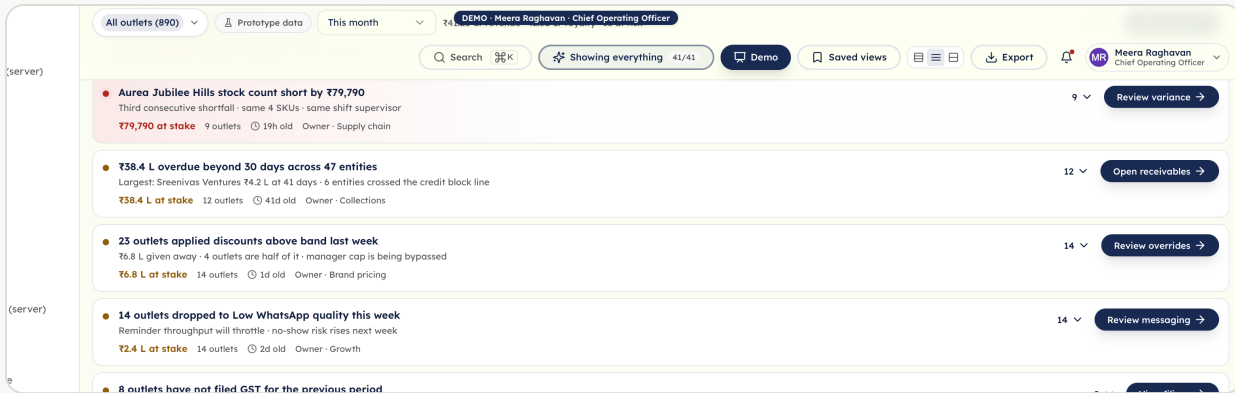

...and 100+ live modules

Across Overview, Money, Govern, Operate, Grow, Expand, Intel and Settings. Full dated module list available for due diligence.

Every leak named, priced and owned.

SIGNALS QUEUE

ILLUSTRATIVE DEMO DATA

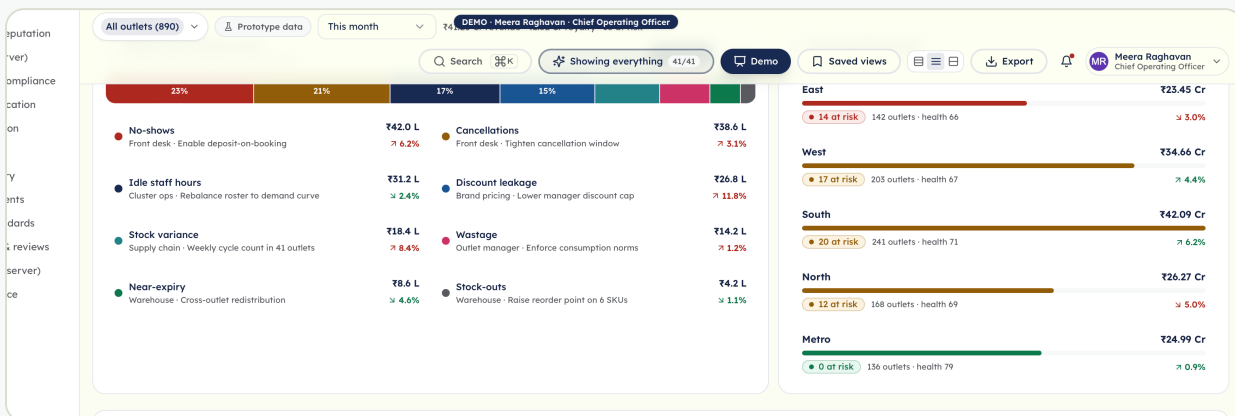

Every signal has an owner and an SLA.

Supply chain, Collections, Brand pricing, Growth, Compliance, Marketing — a money problem becomes someone's queue with a deadline, and HQ sees the age of every item. That is governance, not reporting.

- Stock variance — third consecutive shortfall, same SKUs, same shift: Review variance
- Receivables — overdue beyond 30 days, credit-block line crossed: Open receivables
- Discount overrides — manager cap bypassed: Review overrides
- Campaign attribution — HQ campaign bookings, contribution invoice not raised: Contribution ledger

ZONES AND OUTLET LEAGUE

ILLUSTRATIVE DEMO DATA

Royalty on platform revenue, not self-declared revenue.

Cash share above the cluster median, royalty pending or overdue, and open items per outlet surface as signals with an owner.

- Loss breakdown by cause — no-shows, cancellations, idle hours, discount leakage, stock variance, wastage, near-expiry, stock-outs
- Zone performance — revenue, outlets at risk and health per zone, month on month
- Outlet league — FOFO / FOCO, revenue vs cluster median, health score, cash share, royalty status, open items — one row per outlet

Eight command areas. 100+ live modules.

A selection from each area. Every module below is live today.

OVERVIEW

Command centre · Network map · Action queue
· End-to-end chains

MONEY

Royalty & settlements · Receivables & arrears · Money lost · Consolidated P&L · HQ contribution · FOCO payouts · Cash & banking · Board & unit economics · Revenue assurance · E-invoicing, e-way bills & TDS · Statutory payroll filings

GOVERN

Approvals & SLA inbox · Contracts · Document library · Expiry & renewal clock · Legal & signing · Entitlements · Evidence & audit trail · Audit log centre

OPERATE

Outlets · Stock & delivery · Warehouse · Sourcing & tendering · Batch trace & recalls · Receiving & OTP handover · Cycle counts & shrinkage · Quality & audits · Field ops · Capacity & chair yield · Assets & facilities · Lease & real estate · Catalogue & menu · Guest experience & reputation · Workforce & labour compliance · Franchisee relations · HRMS, payroll & statutory registers

GROW

Campaigns · Template distribution · Messaging health · WABA fleet setup · Consent register · Customer equity · Cohorts & channels · Retention missions · Prepaid liability · Customer ownership

EXPAND

Development pipeline · Site selection · Fit-out & ramp · Prospectus · Territories · Resale & transfer · Exit & termination · Distress watch

INTEL

Network intelligence · Findings queue · What-if simulator · Benchmarks · Ask the network · Alert tuning · Scenario studio · Sensitivity & solvers · Rollout & holdouts · Decision log

SETTINGS

Business type & modules · Rules & workflows · Store provisioning · Brand setup & theme studio · Workspaces & personas · Privacy & consent (DPDP) · Security & trust · Access control · Records, retention & legal hold · Integrations, payments hub, events & webhooks · Developer console

Module names as shipped; the full dated list is available for due diligence and is maintained by Product.

Your business command centre — at every outlet.

Owners, franchisees and managers see the same discipline HQ sees, scoped to what they run.

Revenue status, live

- Total bookings scheduled, revenue confirmed, outstanding payments
- Slots at risk — cancellations and no-shows predicted by AI
- Auto-fill status — waitlist conversions happening live
- Services driving profit vs services bleeding money

Leakage detection and upselling

- Loss Engine flags staff discount patterns, underpriced services and capacity gaps
- Revenue Insights surface pricing gaps, cross-sell and VIP loyalty moments
- Impact simulation on rejected bookings and schedule changes
- Dynamic Pricing and gap recommendations run without manual intervention

Customers and marketing

- Churn Prediction with recovery protocols; lifetime value; segmentation
- Automated birthday and loyalty triggers; feedback recovery
- Geo-targeted campaigns in one click; in-app reels; AI upsell messages

Inventory and operations

- AI Inventory Prediction; one-click reorders for existing vendors
- POS integrated — no separate billing
- HRMS for attendance, payroll, leave and scheduling
- Export your complete data any time — you own it

ACCESS & PERMISSION CONTROL

288

permission switches set exact boundaries for every role

- Front desk books but cannot discount or change prices
- Managers view performance but cannot access payouts
- Staff see their schedule, nothing else
- Multi-outlet businesses set different permissions per outlet
- Fraud Detection catches what slips through — one salon found ₹12,400 a month in discounts staff were giving without the owner's knowledge

Three apps. One truth. Your brand on all of them.

PROFESSIONAL APP

Clarity for your team.

- Who is coming, when and for what — with client notes visible before each appointment
- One-tap check-ins; no double bookings; no mid-service WhatsApp interruptions
- Earnings and visits in real time; which services generate more
- AI Business Coach: six personalised tips a day per staff member
- Quality-check to-do lists, rebooking rate and rework-hour visibility
- Digital attendance, home-service coordination, direct line to management

PARTNER APP

Supply chain in the hands of the person opening the box.

- Purchase orders from the brand or the franchisee
- Delivery confirmed by OTP at the outlet door — no signature on a chit
- Batch numbers traced from carton to the service it was used in; a recall is a query, not a panic
- Cycle counts on a schedule, variance in rupees on the HQ screen the same day
- Settlements and contribution ledger both sides can see

CONSUMER APP

Your spot is saved.

- Pick the outlet, the professional and the time; confirm — from anywhere
- No booking fees, no hidden costs; deposit on booking where the brand chooses
- One client profile across salon, clinic and retail
- Reminders, loyalty and prepaid balances that travel with the client
- Feedback in-app with instant recovery alerts to the outlet

Less confusion means a calmer, more productive floor. Better performance means more revenue. Every app writes to the same record HQ reads, the moment it happens.

Ten AI engines, live in production.

Trained on Indian salon, spa and clinic data. Working from day one at every outlet, with no configuration.

Loss Engine

Finds hidden leakage — no-shows, unbilled, discounts

Dynamic Pricing

Adjusts rates to demand and capacity

Revenue Insights

Surfaces untapped opportunity and forecasts

Inventory Prediction

Forecasts stock 7-30 days ahead

Churn Prediction

Flags at-risk clients, triggers retention

Upselling Engine

Right service, right client, right moment

Business Coach

Six tips a day per staff member

Fraud Detection

Catches unauthorised discounts and billing abuse

Staff Performance

Fair, data-driven scoring

Customer Journey

Personalises the next action automatically

Plus, in HQ

Ask the network · What-if simulator · Scenario studio · AI & model governance — one intelligence layer learning across the whole network.

WHAT THE ENGINES HAVE FOUND AND LIFTED

₹88,000

per month — hidden losses discovered for one salon by the Loss Engine

₹42,800

per month — extra revenue from Dynamic Pricing at one salon

₹45,200

per month — growth opportunity surfaced by Revenue Insights at one salon

₹12,400

per month — unauthorised discounts caught by Fraud Detection at one salon

94%

Inventory prediction accuracy, observed

78%

of clients flagged by Churn Prediction come back, observed

Engine uplifts overlap. We never add them into one headline number; the Revenue Control Audit models them together, per outlet, with the overlap removed.

Most software forces you to change how you work. Slotwise doesn't.

We built Slotwise around real salon, spa and clinic operations instead of ideal scenarios — for front-desk speed, non-technical staff and minimal training time. All ten AI engines start on day one with no configuration; they learn your business automatically.

- Front-desk tasks take minimal clicks; bookings happen in seconds
- Inventory updates are instant; HRMS is simplified for daily use
- Non-tech-savvy staff understand it immediately

GO LIVE IN UNDER 48 HOURS

- Simple onboarding; clean and quick data migration
- Staff trained in minutes, not days — training takes one day
- Marketing tools ready from day one
- Your data stays yours: export any time
- Named customer success manager and a direct escalation path

Before

- Calls at all hours; waiting for client confirmations
- Staff checking WhatsApp mid-service
- Double bookings; empty chairs costing money
- Revenue slipping away unnoticed; no idea which services are underpriced
- Staff discount abuse undetected; fake reviews damaging reputation
- Separate billing software; offline loyalty cards; paper feedback forms
- Stock-outs and waste; no way to track staff quality

After

- Calendar stays full — Gap Recommendations and Dynamic Pricing
- No-shows reduced — Churn Prediction and deposit on booking
- Leakage tracked and stopped — Loss Engine
- Underpriced services identified — Revenue Insights
- 288 permission switches and Fraud Detection stop unauthorised discounts
- Integrated POS, purchase orders and Inventory Prediction
- In-app feedback with instant recovery alerts; marketing automation with AI-led upselling

Ready to stop losing money?

Two ways in. Both take less than two minutes.

Book a demo

See your HQ morning, or your outlet's, on illustrative data — then on your own export.
