

FOR SALONS, SPAS AND CLINICS · 1 TO 9 OUTLETS · 2026

SLOTWISE

Your salon's money, found first.

Bookings, billing, clients, staff and stock on one login
— with ten AI engines watching for the money you
are losing without knowing it. Standard setup in 48
hours.

288

Permission switches

₹0

Commission per
booking

Four things you will stop losing.

Slotwise runs the whole salon — bookings, billing, clients, staff, stock. But owners buy it for four outcomes. Everything in the pages that follow serves one of these.

OUTCOME 1

Find the money you are losing now

Unbilled services, uncharged no-shows, unapproved discounts, expiring stock — named in rupees every week, not discovered after the month closes. One salon found ₹88,000 a month.

OUTCOME 2

Fill the empty slots

No-show prediction, deposits on risky bookings, waitlist auto-fill and off-peak offers that go out under approval rules you set — so a Tuesday afternoon earns something.

OUTCOME 3

Stop discount abuse without an argument

288 permission controls set exactly who can discount, override or change a price. Anything above policy is flagged by staff member, with the rupees attached.

OUTCOME 4

Never run out — of stock or of clients

Inventory prediction reorders before the shelf is empty. Churn prediction flags the client whose gap between visits is getting longer, and triggers the offer before it becomes never.

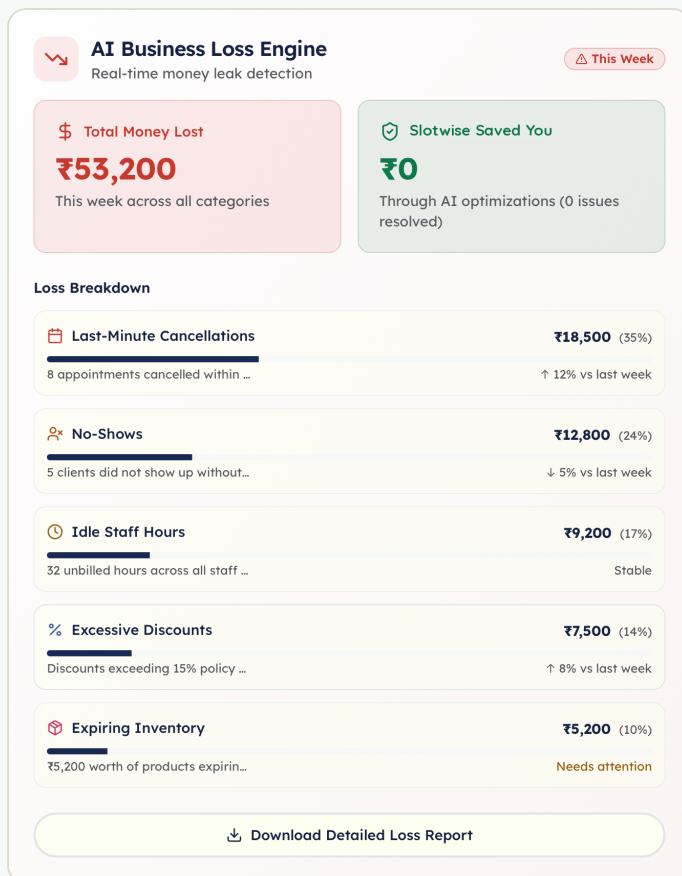

Figures shown in this prospectus from the demo tenant are illustrative. Results vary by outlet and data quality; single-salon figures are stated as such.

Most owners find out after the month closes. You find out this week.

Cancellations, no-shows, idle hours, discounts nobody approved, stock that expires on the shelf. The Loss Engine names each one, prices it and tells you what changed since last week.

AI BUSINESS LOSS ENGINE

ILLUSTRATIVE DEMO DATA

Five leaks, one screen

- Last-minute cancellations — how many, how much, up or down on last week
- No-shows — the clients, the slots, the rupees
- Idle staff hours — unbilled hours across the team
- Excessive discounts — anything above your policy, by staff member
- Expiring inventory — products that will be waste in days, not months

One salon found ₹88,000 a month.

Hidden losses it did not know about, discovered by the Loss Engine in the first month. Your number comes from your own data — the free Revenue Leakage Calculator on the last page gives you a range in two minutes.

The whole salon, handled. No second system.

The same platform that runs national chains, scoped to your outlets. Front desk, floor and back office see the same record the moment it changes.

Appointments

Every chair, therapist and room on one calendar. Walk-ins, online, app and phone bookings land in the same grid. No double bookings, ever.

POS and billing

Bill from the same screen as the booking. Every rupee tracked automatically; no separate billing software.

Clients and memberships

Complete history, preferences and behaviour per client. Memberships, packages and prepaid balances that never get lost in a notebook.

Staff and HRMS

Shifts, attendance, leave, holidays, pay slips, certificates, documents, exits — the admin work that used to live in five WhatsApp groups.

Inventory

Stock levels, reorders and expiries, with AI predicting what you will run out of before you do.

To-do and quality

Quality-check lists per service, rebooking rates and rework hours per team member, announcements to the whole floor in one tap.

ACCESS CONTROL

288

permission switches, down to the module

Front desk books but cannot discount or change prices

Managers view performance but cannot access payouts

Staff see their schedule, nothing else

Different permissions per outlet if you run more than one

Your data stays yours — export any time. Flat plans, no commission per booking, no hidden fees.

A briefing every morning. An answer to every “what if”.

AI BUSINESS COACH

AI REVENUE INSIGHTS

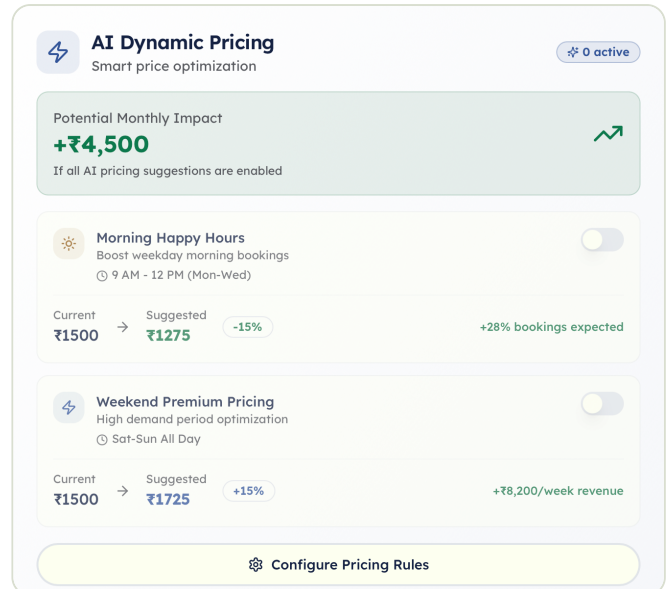

ILLUSTRATIVE DEMO DATA

Idle slot hours, services people search for but cannot book, services underpriced against the market — and a slot-utilisation heatmap by day and time of day. One salon found a ₹45,200 growth opportunity it was missing.

AI DYNAMIC PRICING

ILLUSTRATIVE DEMO DATA

Morning happy hours on quiet weekdays, premium pricing on packed weekends — suggested with the expected impact, switched on when you say so. One salon saw approximately ₹42,800 a month in extra revenue.

You stay in control. Every pricing rule is a toggle. Nothing changes on the menu until you turn it on.

Idle hours, priced

Unbooked prime-time slots counted every month, so a quiet Tuesday morning has a rupee value, not a shrug.

Demand you cannot see

Services clients search for and cannot book — the package you should be selling and are not.

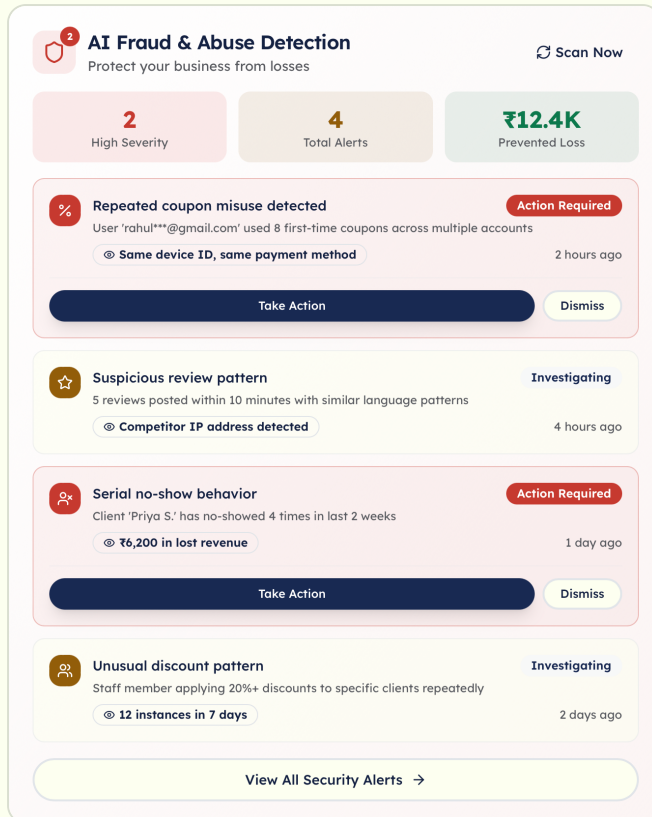

Pricing against the market

Where your menu is under the neighbourhood and by how much, with the suggested increase.

Catch what slips through. Coach who needs it.

AI FRAUD & ABUSE DETECTION

ILLUSTRATIVE DEMO DATA

Coupon misuse across accounts, suspicious review bursts, serial no-shows, staff applying repeated discounts to the same clients. One salon found ₹12,400 a month in discounts staff were giving without the owner's knowledge.

AI STAFF QUALITY SCORE

ILLUSTRATIVE DEMO DATA

Time, satisfaction, rework and rebooking per team member, a team score you can watch move, and an AI tip for each person — so the conversation is about data, not opinion. Six coaching tips a day reach each staff member in their own app.

Take action or dismiss — nothing happens silently

Every fraud alert waits for you. Block the coupon, ask for a deposit from the serial no-show, or clear it with one tap. Every decision is logged.

The conversation is about data, not opinion

Rebooking rate, rework hours and client complaints per person are visible to you and to them. Top performers see it too — that is how you keep them.

Never run out. Never run short.

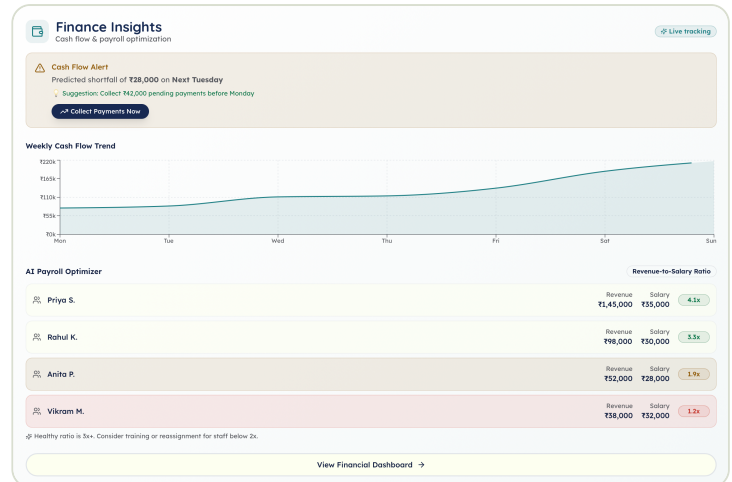

AI INVENTORY PREDICTION

ILLUSTRATIVE DEMO DATA

FINANCE INSIGHTS · CASH FLOW AND PAYROLL

ILLUSTRATIVE DEMO DATA

A predicted cash shortfall before it lands, with the pending payments to collect first. Revenue-to-salary ratio per staff member, so you know who the payroll is working for.

94%

Inventory forecast accuracy, observed

78%

of flagged clients returned during the measured period

Days until stock-out per product, predicted demand, the reorder quantity and what it saves — 94% forecast accuracy observed. One-click reorders for existing vendors.

Also working for you from day one: **Churn Prediction** (flags the client who is about to drift and triggers the offer), **Upselling Engine** (right service, right client, right moment) and **Customer Journey** (personalises the next action automatically). Engine uplifts overlap; we never add them into one headline number.

Two apps: one for your team, one for your clients. Standard setup in 48 hours.

PROFESSIONAL APP · FOR YOUR STAFF

Clarity for your team.

- Who is next, what they had last time, notes before each appointment
- One-tap check-ins; no double bookings; no mid-service WhatsApp
- Earnings and visits in real time; which services earn them more
- Six AI coaching tips a day; digital attendance; direct line to you

CONSUMER APP · FOR YOUR CLIENTS

Your spot is saved.

- Pick the outlet, the professional and the time; confirm — from anywhere
- No Slotwise booking commission; deposit on booking if you choose
- Reminders, loyalty and prepaid balances that travel with the client
- Feedback in-app with instant recovery alerts to your desk

MOST SOFTWARE FORCES YOU TO CHANGE HOW YOU WORK

Slotwise doesn't.

Simple onboarding; clean and quick data migration from your current software or spreadsheets

Staff trained in minutes, not days — front-desk tasks take minimal clicks

All ten AI engines enabled from day one

Your data stays yours: export any time · Named customer success manager

Before

- Calls at all hours; staff on WhatsApp mid-service
- Double bookings; empty chairs; revenue slipping unnoticed
- Discount abuse undetected; stock-outs and waste
- Separate billing; offline loyalty cards; paper feedback

After

- Calendar stays full — gap recommendations and dynamic pricing
- Leakage named, priced and assigned for action — Loss Engine
- 288 permission controls prevent unapproved discounts; Fraud Detection flags suspicious patterns
- POS, inventory prediction, in-app feedback, automated upselling

Find your number first. Then decide.

Two ways in. Both take less than two minutes, and neither asks for a card.

Revenue Leakage Calculator

Fifteen numbers you already know — chairs, average bill, no-shows last month — give you a leakage range for your salon.
